Abhiroop Hiremath

Software Developer

7624092830 · abby06102004@gmail.com · github.com/amateuristrying

Building products from interface to infrastructure. Obsessed with LLMs and automation. AI is the frontier. Discipline is the edge. I design. I engineer. I ship.
For my personal project, check out heresmybuisnesscard.vercel.app.

PROJECTS

Personal Portfolio abhiroops.pages.dev
Built an interactive portfolio presenting my software projects, developer profile, and professional links, with animated visuals, switchable themes, and a project carousel for exploring my work.

Sofign sofign.pages.dev
Created a design and development studio website showcasing digital products, brand experiences, and live project previews for startups and businesses, with service navigation and a direct enquiry flow.

FourSets foursets.pages.dev
Developed a fitness project for exercise and meal logging, with a companion website presenting movement metrics, training progression, and animated exercise visualizations.

AGU - Artificial General Understanding agu2030.pages.dev
Built an interactive AI project-context prototype showing how files, GitHub history, databases, and notes can be connected into a shared view of decisions, timelines, memory, and next steps.

EZCAT ezcat.pages.dev
Developed a CAT preparation experience featuring daily AI-curated past-paper practice, mock tests, weakness analysis, progress tracking, and personalized study guidance to help aspirants build focused practice habits.

Raayo raayo.pages.dev
Built a prediction-market interface for Indian events across cricket, politics, finance, and technology, with category filters, probability charts, market discovery, and bookmarks to help users explore changing expectations.

WORK EXPERIENCE

Uniproc Energies Private Ltd.

May 2024 – Dec 2025

· Built and scaled a full B2B SaaS fleet management platform from scratch —
migrated a client's manual Excel-based reporting to Tableau dashboards, then architected and developed a production-grade web application with real-time GPS tracking, geofencing, speed violations, and trip analytics, now actively generating revenue.

· Owned the full stack independently —
sole developer responsible for frontend (React), backend pipelines, database architecture (PostgreSQL/Supabase), cloud infrastructure (AWS), and third-party API integrations including geofence and WebSocket systems for a live logistics operation.

· Leveraged AI tooling to compress development timelines significantly —
used AI-assisted development throughout the entire stack to accelerate delivery of a complex, multi-layered B2B SaaS product that would typically require a full engineering team, cutting build time while maintaining production-grade quality.

Foundever

Feb 2023 – Oct 2023

· Served as CRM Developer with hands-on cross-functional involvement —
actively collaborated with the sales and calling teams on the floor to personally test and validate new system updates, ensuring changes worked correctly in real operational conditions before full rollout.

· Core CRM responsibilities —
handled support tickets for bugs and access issues, imported and deduplicated records from legacy CRMs, customized workflows, managed user permissions, built reports, and ensured the CRM accurately reflected live sales operations.

EDUCATION

Bachelor of Engineering in Electronics and Telecommunication
